

PERSONAL SECURITY AUDIT REPORT

Auditor: Lokendranath

Audit Date: 05 May 2026

Engagement: Personal Digital Security Assessment

Methodology: Scope → Intelligence → Exposure → Severity → Remediation

1. SCOPE

- 1 Primary email: lokendranath@gmail.com
- 2 Key accounts: Google, Instagram, LinkedIn, GitHub, Banking App
- 3 Primary device: Android Smartphone (Moto G85 5G), Windows Laptop
- 4 Network: Home Wi-Fi

2. EXECUTIVE SUMMARY

The assessment identified 1 critical, 2 high, and 3 medium-risk issues affecting overall digital security. The primary risks include password reuse and incomplete multi-factor authentication (MFA) across key accounts. Immediate actions improved account protection, with remaining items scheduled for remediation.

3. FINDINGS

CRITICAL

- 1 Primary email (Gmail) does not have 2FA enabled
- 2 Same password reused across email, Instagram, and banking apps

HIGH

- 1 Old data breach exposure (email found in leaks)
- 2 Unknown device session previously logged into Google account

MEDIUM

- 1 10+ third-party apps connected to Google account
- 2 Weak password pattern (Name@123)
- 3 Personal email publicly visible on social media

LOW

- 1 Old unused accounts still active
- 2 Browser auto-saving passwords

4. ACTIONS TAKEN DURING AUDIT

- 1 Enabled Google Authenticator 2FA on Gmail
- 2 Logged out from unknown sessions

- 3 Removed unused third-party apps
- 4 Updated Instagram password

5. REMEDIATION PLAN

This Week

- 1 Enable 2FA on all accounts
- 2 Replace reused passwords with strong unique passwords

This Month

- 1 Set up Bitwarden password manager
- 2 Delete unused accounts
- 3 Enable device-level security
- 4 Review privacy settings
